The present invention describes a method (M1) for amplifying a nucleic acid strand. M1 comprises providing an engineered nucleic acid strand (S) acid strand. M1 comprises providing an engineered nucleic acid strand (S) having a predetermined sequence at the other, and contacting (S) with a primer having the predetermined sequence in the presence of a polymers or nucleotides. M1 as degenered in the presence of a polymers or nucleotides. M1 as described is an engineered nucleic acid strand (I) having a predetermined sequence at one end and a sequence complementary to the predetermined sequence at the other end. M1 is useful for the predetermined sequence at the other end. M1 is useful for proparing amplified products that can be used complementary. M1 is useful for preparing amplified products that can be used complementary m1 is useful for preparing where the vector can be used to transform an appropriate host organism to produce the polypeptide or protein encoded by the target sequence. M1 is useful to amplify a family of related sequences to build a complex library such as, for example an antibody library. M1 is useful not only for producing large amounts of antibody library. M1 is useful not only for producing large amounts of antibody library m1 is useful not only for producing large amounts of antibody library uncleic acid sequence, but also for amplifying simultaneously or the than one different target nucleic acid sequence located on the same or wifferent nucleic acid molecules. Acc62635 to Acc62753 and ABR54841 to hand the present sequence used in the exemplification of the present

The present invention describes a human monoclonal antibody (1) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises: (a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 5 amino acid sequence (13, ADP22417) or (82, ADP22421); and (b) a light chain CDR1 having the two fully defined 11 amino acid sequence (83, ADP22421); and allow a hardown the sample, comprising contacting with (I), and detecting the level of binding between the antibody and TNFa in a patient sample, comprising contacting with (I), and detecting the level of binding between the antibody and TNFa in composition comprising the antibody or its functional fragment and a cariter; (3) treating (M2) an animal suffering from a neoplastic, or an immuno-mediated inflammatory disease by selecting an emphasize of treatment for the disease by administering the human concolonal antibody of (1); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (1); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (1); and (4) inhibiting antiarthritic, antibacterial, antiinflammatory, antiarthritics, antiarthritics, and can be used as a TNFa antagonist. The antibody (I) is useful in the preparation of medicament for treating TNF induced apoptosis, neoplastic disease such as the managonist. The antibody (I) is useful in the preparation of the premach cancer, ondemetrial cancer, kidney cancer, colon cancer, endometrial cancer, kidney cancer, colon cancer, and prostrate cancer; or immuno-mediated inflammatory arbarance and arthritis, glomerial or frequence and restricting or immuno-mediated inflammatory arbarance and arthritis, glomerial or inflammatory arbarance and arthritis, glomerial or frequence and arthritis, glomerial or frequence and arthritis, and arthritis arthritis and arthritis arthritis and arthritis arthritis and arthritis arthritis arthritis and arthritis arthritis and arthritis arthritis arthritismina arthrit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        atherosclerosis, psoriasis, restenosis, autoimmune disease, Crohn's disease, graft-host reactions, septic shock, cachexia, anorexia, and multiple sclerosis. The present sequence represents a human anti-TNFa antibody light chain variable region, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                 Green L, Feng X, Klakamp

New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid arthritis

Example 10; SEQ ID NO 313; 213pp; English.

The present invention describes a human monoclonal antibody (1) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises:

(a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 5 amino acid sequence (81, ADP22417) or (82, ADP22411); and (b) a light chain CDR1 having the two fully defined 11 amino acid sequence (83, ADP22418) or (84, ADP22424). Also described: (1) assaying (M1) the level of TNFa in a patient sample, comprising contacting with (1), and detecting the level of binding between the antibody and TNFa in Eragment and a carrier; (3) treating (M2) an animal suffering an enimal in need of treatment for the disease by administering the human animal in need of treatment for the disease by administering the human concolonal antibody of (1); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (1); and (4) inhibiting main in need of treatment for TNFa induced apoptosis by administering the human monoclonal antibody of (1); and (4) inhibiting contactivitic, antiarterior antiarterior antiarterior antiarterior antiarterior antibodicatic, antiarterior, antiarterior, antiarterior antiarefield antial antial antial antial antial antial antial antial an as a Trea antagonist. The antibody (I) is useful in the preparation of medicament for treating TNF induced apoptosis, neoplastic disease such as breast cancer, ovarian cancer, bladder cancer, lung cancer, glioblastoma, stomach cancer, endometrial cancer, kidney cancer, colon cancer, parcreatic cancer, and prostrate cancer; or immuno-mediated inflammatory diseases such as rheumatoid arthritis, glomerulonophitis, atherosclerosis, psoriasis, restenosis, autoimmune disease, Crohn's disease, graft-host reactions, septic shock, cachexia, anorexia, and

                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to an antibody comprising a variable light chain region or a variable heavy chain region. The antibody and methods are useful for treating a disorder associated with an abnormally high IgE level, e.g. asthma, allergic rhinitis, eccama, urticaria, atopic dermatitis, or a food allergy. The present sequence represents human anti-IgE antibody light chain combined L16 and UK4.

The method involves selecting a suitable human template as the framework for the H (heavy) and L (light) chain variable (V) domains of the high affinity antibody to be made. The method is useful for generating high affinity antibodies useful in diagnostics, prophlaxis and treatment of diseases. The present sequence is L16/JK4 human light chain consensus sequence template. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 EIVMTQSPATLSVSPGERATLSCRASQSVSNNLAWYQQKPGQAPRLLIYGASTRATGIPA 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A; Molecule type: DNA
A; Residues: 1-95 < MAN>
A; Residues: 1-95 < MAN>
A; Note: the authors translated the codon CTC for residue 73 as Phe
C; Comment: This antibody is produced by Epstein-Barr virus-transformed B cell that bears
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heteroterramer; immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     C;Accession: PH0868

New human anti-MUC18 monoclonal antibodies, useful for treating a disease or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.

Claim 3; SEQ ID NO 10; 78pp; English.

The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to MUC18. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUC18 on the call surface such as tumours, specifically melanoma, oesophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and centoral intraeptibelial neoplasis and cancers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human MUC18 monoclonal antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  tumour growth in an animal. The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody antibodies against the MUC18 antigen are useful for diagnosing and treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody light chain, variable region,
                                                                                                                                      9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanome or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting tumour metastasis. The method carcinomas, cancer and other malignancies. The present amino acid sequence represents a light chain from an MUC18 tumour antigen-specific

New internalizing human binding molecules capable of specifically binding to CD72, useful for diagnosing and/or treating B-cell associated diseases, such as cancer or autoimmune disorders.
                                    Human, CD72, B-lymphocyte; receptor; scFv; antibody; cytostatic;
immunosuppressive; cancer; autoimmune disease; gene therapy.
           Human CD72-targeted IgG1 light chain.
                                                                                                                                                                                                                                                  27-JAN-2003; 2003WO-EP050004.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alzhaeimer's disease, atherosclerosis, and restenceds. The present amino acid sequence represents the light chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The present sequence is the protein sequence of the light chain of human 1990 antibody 024, which specifically recognises human B cell associated antigen CD72. An scFv ADR2322 selected from an antibody phage display library was shown to specifically recognises the human CD72 receptor. The scFv was recloned in 19G expression vector CO1 using primers designed to restore complete human frameworks, thereby generating antibody 024. Such anti-CD72 immunoglobulins or their antigen-binding fragments can be used as internalising human binding molecules of the invention. These internalising human binding molecules are capable of (specifically) binding to CD72 or its antigence determinant, and preferably bind to CD72 critically) binding to CD72 or its antigence determinant, and preferably bind to casociated with cells. Upon binding to CD72 present on the surface of target cells, the binding molecules internalise. In addition to the internalising human binding molecules, the invention provides internalising human binding molecules, the invention provides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tag (toxic substance, radioactive substance, liposome and/or enzyme), nucleic acids encoding these, and compositions comprising them. The internalising human binding molecule, immunoconjugate, nucleic acid molecule or composition can be used in the diagnosis and/or treatment of a B cell associated disorder or disease, especially a B cell associated cancer and B cell associated autoimmune disorder (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 DIQMIQSPSSLSASVGDRVIITCRASQSISSYLNWYQQKPGKAPKLLIYAASSLQSGVPS 60

                                                                                                                 윤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the protein sequence of the light chain of human 1951 antibody 004, which specifically recognises human B cell associated antigen CD72. An scrv ADRA3120 selected from an antibody phage display library was shown to specifically recognise the human CD72 receptor. The scrv was recloned in 19G expression vector C01 using primers designed to restore complete human frameworks, thereby generating antibody 004. Such anti-CD72 immunoglobulins or their antigen-binding fragments can be used as internalising human binding molecules of the invention. These internalising human binding molecules are capable of (specifically) associated with cells. Upon binding to CD72 present on the surface of target cells, the binding molecules internalise. In addition to the internalising human binding molecules, the invention provides internalising human binding molecules, the invention provides communicates comprising an internalising human binding molecules, immunoconjugates comprising an internalising human binding molecules, infantance, and compositions comprising them. The cag (toxic substance, radioactive substance, libosome and/or enzyme), nucleic acids encoding these, and compositions comprising them. The composition can be used in the diagnosis and/or treatment of a B cell associated disorder or disease, especially a B cell associated cancer and B cell associated autoimmune disorder (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New internalizing human binding molecules capable of specifically binding to CD72, useful for diagnosing and/or treating B-cell associated diseases, such as cancer or autoimmune disorders.

New internalizing human binding molecules capable of specifically binding to CD72, useful for diagnosing and/or treating B-cell associated diseases, such as cancer or autoimmune disorders.

Example 5; SEQ ID NO 58; 174pp; English

```
The present sequence is the protein sequence of the light chain of human 1gg1 antibody 132, which specifically recognises human B cell associated antigen CD72. An scFv ADR2332 selected from an antibody phage display library was shown to specifically recognise the human CD72 receptor. The scFv was recloned in 1gG expression vector CO1 using primers designed to restore complete human frameworks, thereby generating antibody 132. Such anti-CD72 immunoglobulins or their antigen-binding fragments can be used as internalising human binding molecules of the invention. These internalising human binding molecules are capable of (specifically) binding to CD72 or its antigenic determinant, and preferably bind to CD72 binding to CD72 present on the surface of target cells, the binding molecules internalise. In addition to the internalising human binding molecules, the invention provides internalising human binding molecules, the invention provides in the configuration of the internalising human binding an internalising human binding molecules, the invention provides in the configuration of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CD72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

The present sequence is the human immunoglobulin superfamily protein IGFAM-10. Its gene was isolated from a cDNA library of colon tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system disorders (such as inflammation, AIDS, allergies, anesmia, arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, multiple sclerosis, psoriasis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunoglobulin superfamily proteins, the agonist and antagonist of the protein is useful for preventing and treating disorders associated with altered levels of the protein such as cancer, immune system disorders.

The present sequence is the protein sequence of the light chain of human antigod, 041, which specifically recognises human B cell associated antigon CD72. An SCFV ADR23330 selected from an antibody phage display library was shown to specifically recognise the human CD72 receptor. The ScFV was recloned in IgG expression vector CO1 using primers designed to restore complete human frameworks, thereby generating antibody 041. Such anti-CD72 immunoglobulins or their antigen-binding fragments can be used internalising human binding molecules are capable of (specifically) binding to CD72 or its antigenic determinant, and preferably bind to CD72 exists antigenic determinant, and preferably bind to CD72 or its antigenic determinant, and preferably bind to CD72 arguer calls, the binding molecules internalise. In addition to the internalising human binding molecules, the invention provides immunoconjugates comprising an internalising human binding an internalising human binding molecules, the invention provides

tag (toxic substance, radioactive substance, liposome and/or enzyme), nucleic acids encoding these, and compositions comprising them. The internalising human binding molecule, immunoconjugate, nucleic acid molecule or composition can be used in the diagnosis and/or treatment of a B cell associated disorder or disease, especially a B cell associated cancer and B cell associated autoimmune disorder (claimed).

Sequence 214 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alheimer's disease, atheroscolerosis, and restenosis. The present amino acid sequence represents the light chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.
rheumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative colitis), complications of cancer, haemodialysis and extracorporeal circulation, trauma and haematopoietic cancer (such as leukaemia) and infections caused by bacteria, viruses, fungi or parasites

The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Albeimer's disease, atherosclerosis, and restenosis. The present amino acid sequence represents the light chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.

Its gene was isolated from a cDNA library of synovial membrane tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system disorders (such as inflammation, AIDS, allergies, ansemia, arteriosclerceis, as athma, atherosclercois, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, multiple sclerosis, psoriasis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative colitis), complications of cancer, haemodialysis and extracorporal circulation, trauma and haematopoietic cancer (such as leukaemia) and infections caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunoglobulin superfamily proteins, the agonist and antagonist of the protein is useful for preventing and treating disorders associated with altered levels of the protein such as cancer, immune system disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a human monoclonal antibody (I) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises:

(a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22421); and (b) a light chain CDR1 having the two fully defined 11 amino acid sequence (S3, ADP22417) or (S4, ADP22424). Also described: (1) assaying (M1) the level of TNFa in a patient sample, comprising conteacting with (I), and detecting the level of binding between the antibody and TNFa in fragment and a carrier; (3) treating (M2) an animal suffering from a neoplastic, or an immuno-mediated inflammatory disease by selecting an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid arthritis.
                                                                                                                 Human anti-TNFa antibody light chain variable region SEQ ID NO:308
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      쫎

constructive, vasotropic and antiapoptosis, nephasotropic,
constructive, vasotropic and antiapoptosis, neoplastic disease such as
cc as TNFa antagonist. The antibody (I) is useful in the preparation of
medicament for treating TNF induced apoptosis, neoplastic disease such as
concer, ovarian cancer, bidder cancer, lung cancer, glioblastoma,
cc breast cancer, endometrial cancer, kidney cancer, colon cancer,
concer, endometrial cancer, kidney cancer, colon cancer,
concer, endometrial cancer, solon cancer,
concer, endometrial cancer, simmuno-mediated inflammatory
cdiseases such as rheumatoid arthritis, glomerulonephritis,
cdiseases, graft-host reactions, septic shock, cachexia, anorexia, and
cmultiple sclerosis. The present sequence represents a human anti-TNFa
concernation of the present invention.
                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                  9

```
The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Albeimer's disease, atherosclerosis, and restenosis. The present amino acid sequence represents the light chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                              9

```

```
(MAb) light chain variable region, useful in medicine, pharmacology and blochemistry. The isotype of a MAb secreted by the human/human hybridoma HT was determined to be mu and kappa. Human MAb was purified, and the antigen recognised by human MAb CIN"-IgM identified by western blotting

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
